20 Mbps up**MONTHLY PRICE**
\$49.99**TESTS**
19 run, 16 counted
7 days

TYPICAL SPEED (MEDIAN)

89 Mbps 89% of your plan

"Typical" is the middle value (median) of the 16 counted tests, so one unusually fast or slow test doesn't move it much. 3 tests weren't counted, for reasons on page 3.

Day by day

Each day = average of that day's counted tests vs your 100 Mbps plan. "eve" = had an evening test.

EVENING SLOW SPOT

61 Mbps

Evenings (5 to 10 PM) averaged **61% of your plan**, vs **92%** during the day.

OVERPAY ESTIMATE

≈ \$5/month

About **\$60 a year** for speed you pay for but don't get, based on the typical (median) speed. An estimate, not a bill.

REPORT STATUS

Complete

16 counted tests on 7 days, 6 in the evening, 4 on the weekend. Needed: 8 tests, 2 evening, 4 days, 1 weekend.

What this means

During the day you get close to the speed you pay for (about 92%). In the evening, when more people in your area are online, speed drops to about 61%, and it fell as low as 42 Mbps on Wed Oct 7 at 7:12 PM. The rest of this report is the detail your provider's support team can use: every test with its time, how it was measured, and why some weren't counted.

FASTEST TEST

96 Mbps

Sun Oct 11 · 8:47 AM

SLOWEST TEST

42 Mbps

Wed Oct 7 · 7:12 PM

UPLOAD

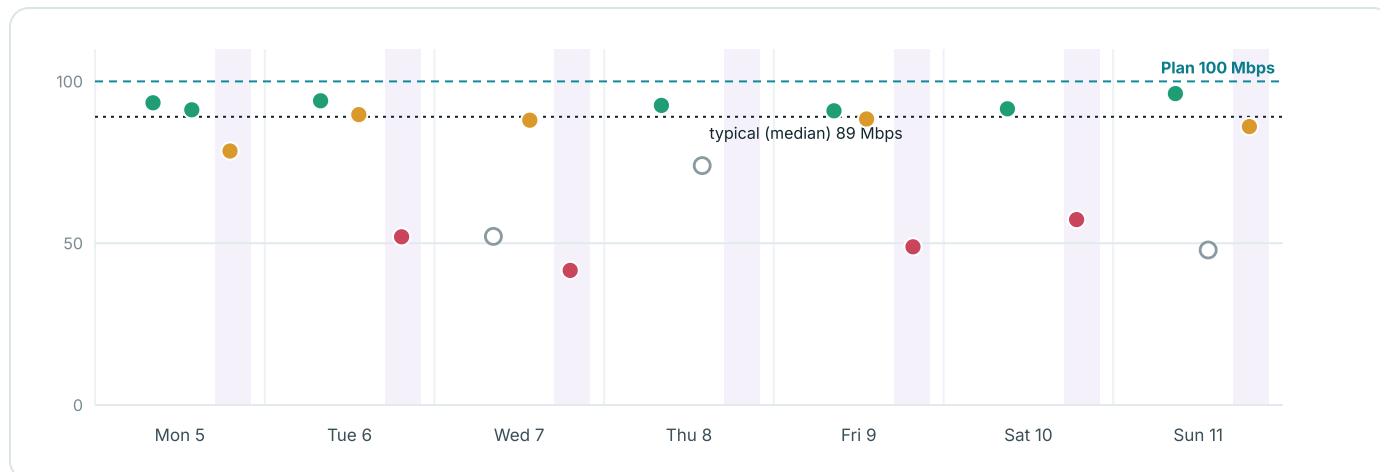

18 Mbps

average · 92% of your 20 Mbps plan

Same report for you and your provider. Every page shows the same numbers. Pages 2 to 4 are written for a support team, page 1 for you.

Not counted (3)

Tests are left out when the result would be unfair to the provider: a VPN is on, the Wi-Fi signal is under 50%, the PC is already using the network (8 Mbps or 5% of plan, whichever is higher), or the test didn't finish. They stay in the log so nothing is hidden.

Missed slots (2)

- Thu Oct 8 · Evening: no test (HonestPing was closed)
- Sat Oct 10 · Afternoon: no test (HonestPing was closed)

Tests run only while HonestPing is open. 21 slots were planned (3 a day).

Method

Each test

- **Multi-connection:** 4 parallel download connections (8 on lines over 300 Mbps), 2 for upload.
- **Warm-up skipped:** the first 1.0 s of each transfer isn't counted, so connection start-up doesn't drag the number down.
- **Median:** the result is the median of 250 ms steps across the rest of the transfer.
- **Length:** automatic tests: 4 s down, 3 s up. Quick checks: 10 s down, 8 s up. Same method version (v2) for all 19 tests.
- **Ping:** median of 10 idle pings, plus ping measured during the download.

The week

- 3 slots a day: morning (7 to 10:30 AM), afternoon (12 to 4 PM), evening (5:30 to 9:30 PM), shifted a little each day.
- Missed slots aren't made up in a burst. A quick check in an empty slot fills it (test #8).
- Percent of plan uses the plan saved when the week started: 100 Mbps down, 20 Mbps up.
- Test server: public speed-test server, Denver area. All times Mountain Time (UTC-6).

Connection

Wired (Ethernet)	18 tests
Wi-Fi	1 test (not counted, weak signal)
VPN detected	1 test (not counted)
Network adapter	Same PC all week

Overpay estimate

Monthly price $\times$ (1 – typical speed $\div$ plan) = $\$49.99 \times (1 - 89.05 \div 100) = \mathbf{\$5.47}$, shown as about \$5/month (\$60/year). It counts the unpaid share of the plan as speed not received. It is an estimate, not your provider's bill.

Report fingerprint

45c24bbb2dc0dfd034605fe4c7b823a34f38f10eb0b17c96c21205e112e95fa

SHA-256 of all 19 test records in this report, including the ones not counted. Anyone can recompute it from the exported CSV. If a single number changes, the fingerprint no longer matches. Generated Mon Oct 12, 2026, 9:14 AM MT on this PC. HonestPing does not upload or send this report.
